Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-3. (canceled)

4. (currently amended) An electronic educational toy having a housing for

teaching letters, words, numbers or pictures, comprising:

a toy housing supporting a planar work platform on which a child can make selections

by causing contact across the planar surface of the work platform and, the toy housing

enclosing:

a speaker,

a processor, and

at least a portion of a sensing system capable of distinguishing between two or

more simultaneous co-existing child-caused contacts with the work surface platform,

wherein the sensing system comprises a grid of wires, wires of the grid being

sequentially energized so that contact caused by the child generates a variation in one

or more of the wires of the grid from which the location of contact on the work

platform can be determined;

a first learning mode wherein the child explores letters, words, numbers or pictures by

causing contact with the work platform without there being an incorrect selection, or

indication of an incorrect selection, of a letter, word, number or picture and the toy provides

audio feedback to the child when such contact corresponds to the selection of a letter, word,

number or picture, the audio feedback relating to the selected letter, word, number or picture;

and

a second learning mode including:

a plurality of audio prompts output by a the speaker enclosed within the toy

housing, a prompt including a question or instruction having at least one correct

- 2 -

response, the question or instruction designed to encourage a child to make a cognitive selection of a letter, word, number or picture and indicate the cognitive selection of the letter, word, number or picture by causing contact with the work platform, ;

the occurrence of contact on the work platform in response to the question or instruction indicating the cognitive selection by the child of the letter, word, number or picture corresponding to the question or instruction, ;

the processor enclosed within the toy housing capable of: a) executing educational software, b) receiving information from the sensing system corresponding to the occurrence of contact by the child on the work platform and, c) using the information from the sensing system to determine whether the child's cognitive selection of the letter, word, number or picture as indicated by the occurrence of contact by the child on the work platform corresponds to a correct response to the question or instruction, ;

a first audio feedback response output by the speaker enclosed within the toy housing, the first audio feedback response indicating that the letter, word, number or picture selected by the child corresponds to a correct response to the question or instruction, ; and

a second audio feedback response output by the speaker enclosed within the toy housing, the second audio feedback response indicating that the selection by the child is something other than a correct response to the question or instruction.

- 5. (previously presented) An electronic educational toy as in claim 4, wherein in the first and second learning modes, the child causes contact with the work platform by placing an object on the work platform.
- 6. (previously presented) An electronic educational toy as in claim 4, wherein the processor generates questions or instructions with different levels of difficulty.

- 3 -

7. (previously presented) An electronic educational toy as in claim 6, wherein the

processor generates more difficult questions depending on the user having provided correct

previous answers.

8. (previously presented) An electronic educational toy as in claim 4, further

comprising in the second learning mode a second prompt specifically asking the child to try

to respond to the question or instruction again in the event the letter, word, number or picture

selected by the child does not correspond to a correct response to the question or instruction.

9. (previously presented) An electronic educational toy as in claim 4, further

comprising a plurality of images presented on the work platform to the child to facilitate the

interaction between the educational software and the child, wherein the images presented on

the work platform are changed from time to time, the processor being aware of the change of

images without the child having to assist in advising the toy that the presented images have

been changed.

10. (previously presented) An electronic educational toy as in claim 4, wherein at

least a portion of the educational software is capable of being loaded into the toy by users

thereof.

11. (previously presented) An electronic educational toy as in claim 10, wherein at

least a portion of the educational software is capable of being loaded via a portable memory

capable of being inserted by the user into a portable memory receiving device associated with

the toy.

12. (previously presented) An electronic educational toy as in claim 10, wherein at

least a portion of the educational software is capable of being downloaded from a remote

location over a data transmission medium.

13. (currently amended) An electronic educational toy having a housing for

teaching letters, words, numbers and pictures, comprising:

- 4 -

a toy housing supporting a planar work platform on which a child can make selections by causing contact across the planar surface of the work platform, the toy housing enclosing:

a speaker,

a processor, and

at least a portion of a sensing system comprising a grid of wires, the sensing system sensing the location of a first contact caused by the child on the planar surface of the work platform and, while the first contact is maintained in position to be sensed by the sensing system, sensing the location of a second contact caused by the child on the planar surface of work platform;

a first learning mode wherein the child explores letters, words, numbers or pictures by causing contact with the work platform without there being an incorrect selection, or indication of an incorrect selection, of a letter, word, number or picture and the toy provides audio feedback to the child when such contact corresponds to the selection of a letter, word, number or picture, the audio feedback relating to the selected letter, word, number or picture; and

a second learning mode including:

a plurality of audio prompts output by the speaker enclosed within the toy housing, a prompt including a question or instruction having at least one correct response, the question or instruction designed to encourage a child to make a cognitive selection of a letter, word, number or picture and indicate the cognitive selection of the letter, word, number or picture by causing contact with the work platform, ;

the occurrence of contact on the work platform in response to the question or instruction indicating the cognitive selection by the child of the letter, word, number or picture corresponding to the question or instruction, ;

the processor enclosed within the toy housing capable of: a) executing educational software, b) receiving information from the sensing system corresponding to the occurrence of contact by the child on the work platform and, c) using the information from the sensing system to determine whether the child's cognitive selection of the letter, word, number or picture as indicated by the occurrence of

contact by the child on the work platform corresponds to a correct response to the question or instruction,

a first audio feedback response output by the speaker enclosed within the toy housing, the first audio feedback response indicating that the letter, word, number or picture selected by the child corresponds to a correct response to the question or instruction, ; and

a second audio feedback response output by the speaker enclosed within the toy housing, the second audio feedback response indicating that the selection by the child is something other than a correct response to the question or instruction.

- 14. (previously presented) An electronic educational toy as in claim 13, wherein in the first and second learning modes, the child causes contact with the work platform by placing an object on the work platform.
- 15. (previously presented) An electronic educational toy as in claim 13, wherein the processor generates questions or instructions with different levels of difficulty.
- 16. (previously presented) An electronic educational toy as in claim 15, wherein the processor generates more difficult questions depending on the user having provided correct previous answers.
- 17. (previously presented) An electronic educational toy as in claim 13, further comprising in the first learning mode a second prompt specifically asking the child to try to respond to the question or instruction again in the event the letter, word, number or picture selected by the child does not correspond to a correct response to the question or instruction.
- 18. (previously presented) An electronic educational toy as in claim 13, further comprising a plurality of images presented on the work platform to the child to facilitate the interaction between the educational software and the child, wherein the images presented on the work platform are changed from time to time, the processor being aware of the change of

images without the child having to assist in advising the toy that the presented images have been changed.

19. (previously presented) An electronic educational toy as in claim 13, wherein at

least a portion of the educational software is capable of being loaded into the toy by users

thereof.

20. (previously presented) An electronic educational toy as in claim 19, wherein at

least a portion of the educational software is capable of being loaded via a portable memory

capable of being inserted by the user into a portable memory receiving device associated with

the toy.

21. (previously presented) An electronic educational toy as in claim 19, wherein at

least a portion of the educational software is capable of being downloaded from a remote

location over a data transmission medium.

22. (currently amended) An electronic educational toy having a housing for

teaching letters, words, numbers or pictures, comprising:

a toy housing supporting a planar work platform on which a child can make selections

by causing contact across the planar surface of the work platform, the toy housing enclosing:

a speaker,

a processor, and

at least a portion of a sensing system designed to sense the lateral movement

of a child-caused contact across the face of the work surface platform while the

contact is maintained with the work platform;

a plurality of age-specific educational software wherein different software has been

written for the toy for children of different educational levels and ages;

a movement tracking capability wherein in response to an audio prompt a child causes

contact with the work platform to laterally move across the face of the work surface platform

while the contact is maintained with the work platform and the processor detects the path of

the contact as it moves laterally across the face of the work platform; and

- 7 -

a learning mode including:

a plurality of audio prompts output by the speaker enclosed within the toy

housing, a prompt including a question or instruction having at least one correct

response, the question or instruction designed to encourage a child to make a

cognitive selection of a letter, word, number or picture and indicate the cognitive

selection of the letter, word, number or picture by causing contact with the work

platform, ;

the occurrence of contact on the work platform in response to the question or

instruction indicating the cognitive selection by the child of the letter, word, number

or picture corresponding to the question or instruction, ;

the processor enclosed within the toy housing capable of: a) executing the

plurality of educational software, b) receiving information from the corresponding to

the occurrence of contact by the child on the work platform and, c) using the

information from the sensing system to determine whether the child's cognitive

selection of the letter, word, number or picture as indicated by the occurrence of

contact by the child on the work platform corresponds to a correct response to the

question or instruction, ;

a first audio feedback response output by the speaker enclosed within the toy

housing, the first audio feedback response indicating that the letter, word, number or

picture selected by the child corresponds to a correct response to the question or

instruction, ; and

a second audio feedback response output by the speaker enclosed within the

toy housing, the second audio feedback response indicating that the selection by the

child is something other than a correct response to the question or instruction.

23. (currently amended) An electronic educational toy as in claim 22, wherein in

the learning mode, the child causes contact with the work platform by placing an object on

the work platform and, in the movement tracking capability, the child moves an object

laterally across the planar surface of the work surface platform.

-8-

An electronic educational toy as in claim 22, wherein 24. (previously presented)

the processor generates questions or instructions with different levels of difficulty.

25. (previously presented) An electronic educational toy as in claim 24, wherein

the processor generates more difficult questions depending on the user having provided

correct previous answers.

An electronic educational toy as in claim 22, further 26. (previously presented)

comprising in the learning mode a second prompt specifically asking the child to try to

respond to the question or instruction again in the event the letter, word, number or picture

selected by the child does not correspond to a correct response to the question or instruction.

27. (previously presented) An electronic educational toy as in claim 22, further

comprising a plurality of images presented on the work platform to the child to facilitate the

interaction between the educational software and the child, wherein the images presented on

the work platform are changed from time to time, the processor being aware of the change of

images without the child having to assist in advising the toy that the presented images have

been changed.

28. (previously presented) An electronic educational toy as in claim 22, wherein at

least a portion of the educational software is capable of being loaded into the toy by users

thereof.

An electronic educational toy as in claim 28, wherein at 29. (previously presented)

least a portion of the educational software is capable of being loaded via a portable memory

capable of being inserted by the user into a portable memory receiving device associated with

the toy.

30. (previously presented) An electronic educational toy as in claim 28, wherein at

least a portion of the educational software is capable of being downloaded from a remote

location over a data transmission medium.

- 9 -

31. (currently amended) An electronic educational toy having a housing for teaching letters, words, numbers or pictures, comprising:

a toy housing supporting a planar work platform on which a child can make selections by causing contact across the planar surface of the work platform, the toy housing enclosing:

a speaker,

a processor, and

at least a portion of a sensing system, the sensing system receiving input from the child by sensing occurrences of contact caused by the child across the planar surface of the work platform;

a plurality of age-specific educational software wherein different software has been written for the toy for children of different educational levels and ages;

a plurality of images presented on the work platform to the user to facilitate the interaction between the user and the educational software, wherein the images presented on the work platform are changed from time to time, the processor being aware of the change of images without the child having to assist in advising the toy that the presented images have been changed; and

a learning mode including:

a plurality of audio prompts output by the speaker enclosed within the toy housing, a prompt including a question or instruction having at least one correct response, the question or instruction designed to encourage a child to make a cognitive selection of a letter, word, number or picture and indicate the cognitive selection of the letter, word, number or picture by causing contact with the work platform,;

the occurrence of contact on the work platform in response to the question or instruction indicating the cognitive selection by the child of the letter, word, number or picture corresponding to the question or instruction, ;

the processor enclosed within the toy housing capable of: a) executing the plurality of educational software, b) receiving information from the sensing system corresponding to the occurrence of contact by the child on the work platform and, c) using the information from the sensing system to determine whether the child's

cognitive selection of letter, word, number or picture as indicated by the occurrence of

contact by the child on the work platform corresponds to a correct response to the

question or instruction, ;

a first audio feedback response output by the speaker enclosed within the toy

housing, the first audio feedback response indicating that the letter, word, number or

picture selected by the child corresponds to a correct response to the question or

instruction, ; and

a second audio feedback response output by the speaker enclosed within the

toy housing, the second audio feedback response indicating that the selection by the

child is something other than a correct response to the question or instruction.

32. (previously presented) An electronic educational toy as in claim 31, wherein in

the learning mode, the child causes contact with the work platform by placing an object on

the work platform.

33. (previously presented) An electronic educational toy as in claim 31, wherein

the processor generates questions or instructions with different levels of difficulty.

34. (previously presented) An electronic educational toy as in claim 33, wherein

the processor generates more difficult questions depending on the user having provided

correct previous answers.

35. (previously presented) An electronic educational toy as in claim 33, further

comprising in the directed learning capability a second prompt specifically asking the child to

try to respond to the question or instruction again in the event the letter, word, number or

picture selected by the child does not correspond to a correct response to the question or

instruction.

36. (previously presented) An electronic educational toy as in claim 31, further

comprising an alternative learning mode wherein the child explores letters, words, numbers

or pictures by causing contact with the work platform without there being an incorrect

- 11 -

selection, or indication of an incorrect selection, of a letter, word, number or picture and the

toy provides audio feedback to the child when such contact corresponds to the selection of a

letter, word, number or picture, the audio feedback relating to the selected letter, word,

number or picture.

37. (previously presented) An electronic educational toy as in claim 31, wherein at

least a portion of the educational software is capable of being loaded into the toy by users

thereof.

38. (previously presented) An electronic educational toy as in claim 37, wherein at

least a portion of the educational software is capable of being loaded via a portable memory

capable of being inserted by the user into a portable memory receiving device associated with

the toy.

39. (previously presented) An electronic educational toy as in claim 37, wherein at

least a portion of the educational software is capable of being downloaded from a remote

location over a data transmission medium.

40. (previously presented) An electronic educational toy as in claim 4, wherein the

work platform comprises a touch-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

41. (previously presented) An electronic educational toy as in claim 5, wherein the

work platform comprises a contact-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

42. (previously presented) An electronic educational toy as in claim 13, wherein

the work platform comprises a contact-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

- 12 -

43. (previously presented) An electronic educational toy as in claim 14, wherein

the work platform comprises a contact-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

44. (previously presented) An electronic educational toy as in claim 22, wherein

the work platform comprises a contact-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

45. (previously presented) An electronic educational toy as in claim 23, wherein

the work platform comprises a contact-sensitive electronic display screen capable of

electronically and temporarily displaying the plurality of images on the work platform.

46. (previously presented) An electronic educational toy as in claim 31, wherein

the work platform comprises a contact-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

47. (previously presented) An electronic educational toy as in claim 32, wherein

the work platform comprises a contact-sensitive electronic display screen electronically and

temporarily displaying the plurality of images on the work platform.

48. (previously presented) An electronic educational toy as in claim 4, wherein the

work platform comprises a touch-sensitive surface.

49. (previously presented) An electronic educational toy as in claim 13, wherein

the work platform comprises a touch-sensitive surface.

50. (previously presented) An electronic educational toy as in claim 22, wherein

the work platform comprises a touch-sensitive surface.

51. (previously presented) An electronic educational toy as in claim 31, wherein

the work platform comprises a touch-sensitive surface.

- 13 -

52. (previously presented) An electronic educational toy as in claim 22, further

comprising an alternative learning mode wherein the child explores letters, words, numbers

or pictures by causing contact with the work platform without there being an incorrect

selection, or indication of an incorrect selection, of a letter, word, number or picture and the

toy provides audio feedback to the child when such contact corresponds to the selection of a

letter, word, number or picture, the audio feedback relating to the selected letter, word,

number or picture.

53. (previously presented) An electronic educational toy as in claim 23, further

comprising an alternative learning mode wherein the child explores letters, words, numbers

or pictures by causing contact with the work platform without there being an incorrect

selection, or indication of an incorrect selection, of a letter, word, number or picture and the

toy provides audio feedback to the child when such contact corresponds to the selection of a

letter, word, number or picture, the audio feedback relating to the selected letter, word,

number or picture.

54. (previously presented) An electronic educational toy as in claim 32, further

comprising an alternative learning mode wherein the child explores letters, words, numbers

or pictures by causing contact with the work platform without there being an incorrect

selection, or indication of an incorrect selection, of a letter, word, number or picture and the

toy provides audio feedback to the child when such contact corresponds to the selection of a

letter, word, number or picture, the audio feedback relating to the selected letter, word,

number or picture.

55. (currently amended) An electronic educational toy as in claim 31 further

comprising a movement tracking capability wherein in response to an audio prompt a child

causes contact with the work platform to laterally move across the face of the work surface

platform while the contact is maintained with the work platform and the processor detects the

path of the contact as it moves laterally across the face of the work platform.

- 14 -

56. (currently amended) An electronic educational toy as recited in claim 32 further comprising a movement tracking capability wherein in response to an audio prompt a child causes contact with the work platform to laterally move across the face of the work surface platform while the contact is maintained with the work platform and the processor detects the path of the contact as it moves laterally across the face of the work platform.
